Ultimate realism

The PPED-1 Pro Pedal Set offers a significant step up from our modified Logitech G25 consumer pedals. These Pro Pedals have been engineered to fit into any VirtualGT. The installation is easy and the improved feel takes simulation to a new level. These pedals are a “must have” for any serious racer, especially those using VirtualGT for training.

Engineered for accuracy and durability

The PPED-1 pedal set has its own USB controller that connects directly to VGT’s PC and is recognized as a separate Joy Port 2 controller. The G25 steering wheel continues to be recognized as Joy Port 1. The pedals come with a software application for independently calibrating the throttle, brake and clutch.

Spring rates and travel distance for the throttle and clutch are individually adjustable using the supplied 7/16” box wrench. All three pedal plate heights are also individually adjustable to achieve the perfect heel/toe setup. Additionally, the brake assembly may be moved left or right up to 2”.

Easy installation or retrofit

The PPED-1 pedal set mounts to the VGT Pedal Base using six screws. Remove the old pedals, hinges and tread-plates. Next, crimp on the Pedal Shaker cable extension. Drop the Pro Pedals onto the Pedal Base so the hinge supports that stick up go up and inside the throttle and clutch assemblies. Push the pedals toward the driver as far as they will go, center the pedals left-to-right, and install the six screws. Then place the heel plate in front of the pedals and secure with four screws. Plug in the USB cable and you’re done. All special tools, drill bits, and detailed instructions are supplied. You supply a drill motor and No. 2 Phillips screwdriver.

You owe it to yourself

The PPED-1 Pro Pedal Set is now available for retrofit onto any PC-based VGT. Cost is \$1,499. Installation requires about one hour of time. Factory installation support is also available. Please call for details. The PPED-1 Pro Pedal Set goes well with the WHL-SP Sparco Racing Wheel upgrade for \$599. Purchase both together for \$1,999, save \$100, and convert your VirtualGT into a professional race trainer.
